

PRODUCT SPECIFICATION DATA SHEET.

IRONHORSE™ Triple Disc Converter

When you're hauling "Tough Stuff" and you need the ultimate in durability then Russ Moore "Ironhorse" offers you the industries best option; pick our "Triple Disc" torque converter, it's packed with tons of increased torque capacity, extra cooling & very long life.

The heart of this triple disc torque converter is the billet-steel extra-heavy front cover which does not allow for torque converter "flexing", like the standard factory converter. The billet cover also adds the additional space to incorporate the three clutch discs. This allows the lockup piston to handle the increased torque capacity and horse power, giving much better heat dissipation.

This torque converter is build with an all new "billet-steel" front cover, new stator, new lock-up piston and clutches, new bushings, new Torrington bearings, the sprag assembly receives all new springs and rollers. Finally adding a new hub and furnace braised remanufactured turbine and front cover. The finished assembly is pressure tested, protecting against leaks and computer balanced to ensure a smooth, vibration free product.

These high-quality triple disc converters are manufactured by Russ Moore, this ensure you get the utmost in quality. We follow factory standards, along with our 50 plus years of experience in the performance industry, giving you the toughest transmission packages in the market today; you just can't beat a Russ Moore "Ironhorse".
